

Natural Progesterone Crème

FOR Women ONLY!

Here's a **BIG QUESTION** for you?

Have you experienced any of these symptoms?

Migraines, Fatigue, Irritability, Cramping, Anxiety, Mood Swings, Depression, Fat Gain, Water Retention, Foggy Thinking, Breast Tenderness, Fibrocystic Breasts, Irregular Menstrual Periods, Miscarriages, Infertility, Decreased Sex Drive, Dryness, Endometriosis, Bone Loss, Hair Loss, Hot Flashes, Insomnia, Premature Aging, PMS-Menopausal Symptoms-Bone Loss

In industrialized nations, an over abundance of estrogens, stress, environmental pollution, faulty eating habits and decreased nutrients in food, are creating hormone imbalances referred to as **estrogen dominance**.

Estrogen is routinely fed and/or injected into live stock to fatten them up for market.

Petrochemical companies produce types of environmental pollution that act as estrogen in the human body and this includes yours.

Hormone imbalances create an array of symptoms; many associated with PMS, menopausal symptoms, bone loss and

adrenal exhaustion. These imbalances are being put in check by the use of **natural progesterone**.

Progesterone is a hormone produced by your ovaries and adrenal glands. If you do not have ovaries then it's left up to your over worked adrenal glands. Natural progesterone by West Coast is bio-identical to the progesterone that the human body produces. Today, women are realizing the immediate and long-term benefits of using natural progesterone and estriol crèmes and herbs. Dr. John R. Lee MD, physician and author, writes that natural progesterone creme in applications of 20-30 mg is giving relief to women expressing symptoms of **estrogen dominance**.

Why doesn't my medical doctor prescribe natural progesterone?

Organized medicine and pharmaceutical manufacturers have an age-old relationship. This is not to imply any evil or corruption. Pharmaceutical companies are interested only in medicines that they may **patent for a profit**. Just like anything natural, natural progesterone cannot be patented. Doctors are required to prescribe products only from the pharmaceutical manufacturers.

Why a crème?

Natural progesterone taken orally is mostly destroyed in the digestion process. **TECHNICAL STUFF:** Adequate absorption is only accomplished through topical application in the form of a dermal delivery system. Bio Topical crèmes are a non-comedogenic cold processed liposome creme that is **free of** emulsifiers, isopropyl palmitates, glycerl stearate, octyl palmitate, stearic acid, DEA, triethanolamine (TEA), dimethicone, cyclomethicone, PEG, alcohols, emulsifying wax, dyes, parabens, colors or mineral oil.

Desired ingredients such as progesterone, estriol and herbal concentrates are used in a cold processed creme, giving a superior consistent absorption rate. **West Coast Bio Topical Natural Progesterone Creme** is available now. Talk to the doctor about ordering your crèmes now.
